What would your baby look like if both you and your classmate (who will simulate your spouse) have one dominant gene and one recessive gene for each of the facial features Illustrated in the following pages. In other words, each of you will be heterozygous for each trait. To determine the facial appearance of your child, you and your spouse will each flip a coin to determine what bit of information or gene you will contribute to the child. Heads will represent DOMINANT (shown with a large letter) and TAILS will represent RECESSIVE (shown with a small letter). Flip the coins to determine which gene of each pair you contribute. Each child will have two genes for each trait, one from each parent. You will supply one gene and your spouse will supply one gene. Record the genetic contributions of each parent on the chart provided. When you have determined all of the features for a particular structure (eyes for example), draw and color the way the baby will look after he/she has reached high school age. You and your spouse will produce one child.

The traits indicated by an asterisk are believed to be inherited in the explained manner. Most of the traits, however, in this activity were created to illustrate how human heredity works in a simplified model and to reinforce basic genetics principles. In actuality, inherited characteristics of the face are much more complicated than this activity illustrates. Most of these facial characteristics are determined by many genes working together in a way genetics do not yet understand. We hope you will be successful in this very important role as parents. Your first task is to record your names, as parents, on the attached data sheet.

First, we should determine the sex of the child. Which parent should flip a coin to determine the sex of the child? Heads will be a boy (Y-bearing sperm) and tails will be a girl (X-bearing sperm). Give your child a name and record the name on your data sheet. Continue.

1. PACE SHAPE:

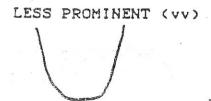

ROUND (RR, Rr)

SQUARE (TT)

CHIN SHAPE: Next three flips

VERY PROMINENT (VV, VV)

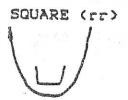

CHIN SHAPE: ONLY flip coins for this trait if chin shape genotype is VV or Vv. (The genotype vv prevents the expression of the next two pairs of genes.)

ROUND (RR, Rr)

CLEFT CHIN: 11900*

PRESENT (AA, Aa)

5. SKIN COLOR:

> To determine the color of skin, assume there are three gene pairs involved. Flip your coins first to determine the genotype of the first pair of genes (AA, Aa, aa). Then flip your coins again to determine the genoptype of the second pair of genes (BB, Bb, bb). Flip for the last time to determine the third pair of genes (CC, Cc, cc). If your gene pairs are -- 1-- then the skin color 15 -- 2 -- .

Each capital letter represents an active allele for pigmentation.

6 capitals - very dark black 3 capitals - medium brown 5 capitals - very dark brown 2 capitals - light brown

3 capitals - medium brown

4 capitals - dark brown

1 capital - light tan

NO capital - white

6. HAIR TYPE: 13945

CURLY (CC)

WAVY (Cc)

STRAIGHT (cc)

7. WIDOW'S PEAK: The hair-line comes to a point in the center of the forehead. 19400

PRESENT (WW, WW)

ABSENT (ww)

8. COLOR OF EYEBROWS: Consider all eyebrow traits (next three) before drawing.

VERY DARK (HH)

MEDIUM DARK (Hh)

LIGHT (hh)

9. EYEBROW THICKNESS:

BUSHY (BB, Bb)

FINE (bb)

10. EYEBROW PLACEMENT:

NOT CONNECTED (NN, Nn)

CONNECTED (nn)

11. EYE COLOR: Darker eyes are produced in the presence of more active alleles. In this situation, the large letters (A or B) represent alleles which are active in

depositing dark pigment. Small letters (a and b) represent alleles which deposit little pigment.

To determine the color of the eyes, assume there are two gene pairs involved, one which codes for depositing pigment in the front of the iris and one which codes for depositing pigment in the back of the iris. Determine the genotype of the first pair (AA, Aa, aa) and then the second pair (BB, Bb, bb). If your genotype is --i-- the eye color is --2--. In reality, the determination of eye color is much more complicated.

1	2	CE CE CE CE	2
AABB	Dark brown	AAbb	Dark blue
AABb	Brown	aaBB	Dark blue
AaBB	Brown	Aabb, aa 8b	Light blue
AaBb	Brown	aabb	Pale blue

EYE TRAITS -- NEXT FOUR FLIPS Determine the phenotype with respect to all four flips before drawing the eyes.

12. EYES -- DISTANCE APART:

CLOSE TOGETHER (EE) AVERAGE DISTANCE (Ee) FAR APART (ee)

13. EYES -- SIZE:

LARGE (EE)

14. EYES -- SHAPE:

ALMOND (AA, Aa)

ROUND (aa)

15. EYES -- SLANTEDNESS:

HORIZONTAL (HH, Hh)

UPWARD SLANT (hh)

16. EYELASHES: 19033 ("movie type")

LONG (LL, LI)

SHORT (11)

Mouth and lips traits will be determined in the next four flips.

17. MOUTH -- SIZE

LONG (MM)

AVERAGE (Mm)

SHORT (mm)

THICK (LL, LI)

THIN (11)

19. PROTRUDING LIP:

VERY PROTRUDING (HH)

SLIGHTLY PROTRUDING (Hh)

ABSENT

20. DIMPLES: 12610

PRESENT (DD, Dd)

ABSENT (dd)

Nose and ear traits are determined in the next 7 flips. Record your genotypes on your data sheet but do not draw these features until all the traits are established.

21. NOSE SIZE:

BIG (NN)

MEDIUM (Nn)

SMALL (nn)

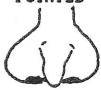

22. NOSE SHAPE:

ROUNDED (RR, Rr)

POINTED (FF)

23. NOSTRIL SHAPE:

ROUNDED (RR, Rr)

POINTED (FF)

Next four flips along with the preceding flip control ear traits.

24. EARLOBE ATTACHMENT:

FREE (FF, Ff)

ATTACHED (ff)

25. DARWIN'S EARPOINT: 12430

PRESENT (DD, Dd)

ABSENT (dd)

26. EAR PITS: 12870*

PRESENT (PP, Pp)

ABSENT (pp)

27. HAIRY EARS: 13950 (Hairy ears is sex-limited to males)

ABSENT (HH, Hh)

PRESENT (hh)

28. FRECKLES ON CHEEKS:

PRESENT (FF, Ff)

ABSENT (ff)

29. FRECKLES ON FOREHEAD:

PRESENT (FF, F7)

ABSENT (ff)

The following concepts can be explained and illustrated by using this activity:

 Each parent contributes one half of each child's genetic make-up. More accurately, each parent
